NOTES

Reading this catalogue

- **Purity** is the hallmark standard recorded for each piece (e.g. 22K = 916 fineness).
- **Gross weight** is the recorded weight of the finished piece, including any stones.
- **Pure metal content** = gross weight × fineness ÷ 1000. Stone weight is not deducted, so it is an upper bound on the pure metal.
- **Prices** are the amounts entered in the catalogue; confirm taxes, making charges and today's metal rate before quoting.
- **Imagery** in this sample is concept imagery used as a placeholder. Production catalogues must use photographs of the actual piece that the business is authorised to use.
- Prepared 21 October 2026 from the live catalogue. Re-import the matching CSV into the software to keep both in sync.
